Re: **PL-97-2265: Conditional Use Permit for Mineral Extraction (Project)
Additional Restoration of Project Site**

We have recently completed the additional restoration work discussed and agreed to in the meeting held with SL County staff, Division of Oil Gas and Mining (DOGM) staff, State of Utah and myself representing Corporation of the Presiding Bishop on July 30, 2001.

Please find the following items enclosed:

- Letter of recommendation from our Mark Williams, ASLA our Landscape Architect for the Restoration Planting dated August 30, 2001.
- Recommended See Mix for site dated July 19, 2001 prepared by Paul Baker, DOGM
- Packing Slip from 30 lbs native seed mix used on site as recommended by DOGM.
- Packing Slip from 300 additional plants planted on site.

We believe that we have met the intent of the restoration requirements of SL County and DOGM including a minimum of 35% vegetation cover based upon surrounding the area. We would expect the area to be given time to propagate with the previous and recently placed plants and seed.

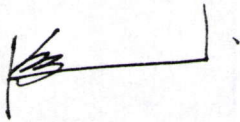

We are somewhat unclear and concerned as to the DOGM stated period of three years following seeding for the site restoration to be released. I believe this requirement is somewhat open an unreasonable in this instance. The site is subject to natural conditions of temperature and moisture cycles. The area even though private property, is subject to heavy access use by individuals of the public that the Owner has no relationship with and little or no control. We have

been pro-active in establishing communication and understanding in the community that we have done restoration activity on site. Communication included placing signs at the road of the Project site, posting restoration work signs at the perimeter of the restoration site and contacting known groups that frequent the canyon requesting their assistance in supporting the restoration efforts by keeping clear of the site to allow restoration efforts to take hold.

We appreciate the input and the continued assistance and cooperation of SL County and DOGM staff. We feel that our approach and the restoration plan developed with staff will be effective and efficient in completing a successful Project.

Thank you.

My Best,

Attn. Kerry Nielsen

Dear Kerry,

This letter is in response to your inquiry about the re-vegetation plans for the Little Cottonwood Quarry site. It is recommended that small plant material be used for re-vegetative purposes. Small sized plant material have a young and vigorous vascular system which allow the plant to succeed in more diverse environmental conditions. Plants that are installed in one gallon size material have traditionally had the greatest success of survival and establishment. One gallon sized plants are young yet strong enough to endure generally unfavorable planting conditions. In the inter-mountain region, one gallon plants are frequently used in re-vegetative programs. I highly recommend you use this size of material based upon the plant varieties specified for the quarry site. Please contact me if you have any further questions.

Sincerely,

Mark F. Williams, ASLA
